DELAWARE P.S.C.

Dear, Representative

Dear representative I would like for you to please stop polluting the air. I would also like to ask you that why don't you try to use Blue Water Wind energy it is save and does not pollute the air and it's also save for the environment .

I really think that this is a really important project because it does not harm the enviornment and is a fixed priced it's also zero carbon so that also means that there will not be any mining, waste ash , they will not have any use in the Blue Water Wind project . I also think this is a good project because unlike Delmarva's power there will be no coal for the energy instead they will use of shore wind for the conversion of electricity and with no use of coal, the price of the coal will not rise, also the leaders of the project have about 15 years of knowledge so I think that this will work.

This are the reasons why I think that the Blue Water Wind should be use so please dear representative please try to make the other people use the Blue Water Wind.

Thank you, for your time

Your friend Johnny Medina

Name

Address

Dear Representative,

Hi, my name is Ashley and I'm a student at Gauger Middle School. I am writing to you because I want a better community. I want your Support for the Blue Water Wind Project.

The reasons why is because we need to have all the help we can get. Also, some details I found out is that unlike using coal for energy , wind energy provides stable cost. The coal cost will rise as a result Of carbon pollution regulations. Our present means of procuring energy harms the environment. Blue Water Wind approaches offshore wind development by working closely with those who will be hosting and benefiting from offshore wind projects. Blue Water Wind approaches Projects by: 1. Working closely with local communities throughout The developing process.

2. Developing projects in areas where public policy invites offshore wind energy.

Last, Thank You very much for your help and I'm being you very much To help us.

Dear, Representative:

JASON@greendelawarerecycling.com

I am writing this letter to explain to you why we should really get the BLUE WATER WIND project started. One of the main reasons why we should start it is because BLUE WATER WIND is a kind of energy in which does not harm the environment. It is an all natural energy that can get energy from the wind.

We really need this so we can help save our environment. What I mean about this is that if we get BLUE WATER WIND we will be able to stop causing extra pollution to the earth. Another thing is that unlike using coal for energy, wind energy will provide a stable cost. Coal costs will also rise as a result of all of the carbon pollution regulations.

So I hope you can see why this project is so great. Please try to listen to me and start helping our environment today with the BLUE WATER WIND project, please.

Thank you,

Tyler Hallett

DECEMBER 18, 2007

DEAR Representative:

I think that you should support the Blue water wind program because they had 15 years of experience with off shore wind parks. That's not the only reason you should support blue water wind cause people come home and try to figure out how to pay bills make their family happy but when you're sitting there and taking people's money knowing they want to have a Christmas as much as you do that's a shame.

I wouldn't want to be working in a place that steals people's money. I'm not any little kid asking you to listen to me. I do want my dad to come home once and not think about the people stealing his money but about his wife and kids.

**Do something about
it please.**

December 18, 2007

Dear Representative

Good morning my name is FELISHA BERBICK I am a student of the GAUGER GOBBS MIDDLE SCHOOL.

MY Main point is BLUE WATER WIND. THE reason why I am writing you is because remember chilling wants Collage degree. We need a better community.

BLUE WATER WIND is all our present means of procuring energy harms the environment mining, waste ash and carbon dioxide negative impact steams. Unlike using coal for energy, provides stable cost coal cost will rise as a result of carbon pollution regulations.

WE NEED
BLUE WATER WIND

THANKS, FELISHA BERBICK

PEACE.

Dear, Representative

Good day sir, it's a nice day wouldn't you say. **Well definitely not for me!** Why, because this morning I woke up and took an annual yawn, to get a breathe of fresh air. Do you know what I got? Some type of gas that tasted like **year-old cheese**. If that's what it taste like now imagine if we had Bluewater Wind, the air would taste like **candy**. So can u explain to every one in **Delaware** why we don't have it and if you can't. You better get used to hearing.

Now in the morning I have to wake up **holding my breathe**. So I advise you do something about it before **someone else takes over!!!**

i know u don't want to go home today and have to worry about people
steeling from u . Have a very Merry Christmas and take my advice.
